

HACKATHON

PROBLEM STATEMENTS

#LEGAL TECH

1. LEGAL RESEARCH AUTOMATION

Develop an AI-driven engine that rapidly scans and contextualizes case law, statutes, and legal documents to streamline case preparation and provide strategic legal insights. Aim to cut down research time drastically while improving result relevance.

2. LEGAL AID CHATBOTS

Build multilingual AI chatbots that deliver accessible legal guidance to underserved users, explain legal procedures clearly, and help evaluate case eligibility. Address language barriers and simplify complex legal concepts.

3. AUTOMATED CONTRACT ANALYSIS & RISK FLAGGING

Create a tool that automatically reviews contracts, identifies risky clauses or inconsistencies, and suggests safer alternative language to reduce legal disputes and improve contract quality across firms.

#FINANCE & MARKET ANALYTICS

1. REAL-TIME MARKET ANALYSIS

Design AI algorithms that instantly analyze stock market trends, social sentiment, and macroeconomic indicators to provide actionable investment signals, especially tailored for high-frequency traders and portfolio managers.

2. AUTOMATED PERSONAL FINANCE OPTIMIZATION

Develop software that uses AI to track users' income, spending, and investment goals, then automatically suggests optimized budgeting, saving, and investment plans to improve financial health.

3. FRAUD DETECTION & PREVENTION SYSTEM

Build a real-time AI-powered system that monitors transactional data to detect and prevent financial fraud with high accuracy, reducing losses and improving trust for fintech companies.

#AGRICULTURE & SUPPLY CHAIN

1. SUPPLY CHAIN AUTOMATION FOR FARM PRODUCE

Build a platform to optimize logistics, inventory, and market matching for farmers, reducing wastage and boosting incomes through data-driven decision-making and transparent supply chains.

2. PREDICTIVE CROP DISEASE MONITORING

Create an AI tool that combines weather data, satellite imagery, and farmer inputs to predict disease outbreaks early, enabling proactive interventions and minimizing crop loss.

3. AUTOMATED FARM RESOURCE MANAGEMENT

Develop a solution that uses IoT sensors and AI to monitor soil health, water usage, and fertilizer needs, recommending precise resource application to maximize yield and reduce environmental impact.

#CONTENT & CREATIVE AUTOMATION

1. CONTENT CREATION AUTOMATION

Design a tool to automatically generate high-quality marketing, legal, or technical content based on input parameters and relevant datasets, empowering users to produce tailored content rapidly.

2. CREATIVE DESIGN AUTOMATION

Create an AI-assisted platform that helps users design logos, UI/UX prototypes, or artistic visuals with minimal manual effort, accelerating creative workflows for businesses and designers.

3. AI-BASED VIDEO AND AUDIO EDITING ASSISTANT

Develop software that automates post-production editing tasks like cutting, color correction, and sound balancing using generative AI, streamlining the content creation pipeline.

#EDUCATION & TRAINING

1. PERSONALIZED EDUCATION & TRAINING SYSTEMS

Build an AI-powered platform that generates customized learning paths, interactive simulations, and real-time assessments tailored to each learner's style and progress.

2. AUTOMATED SKILL GAP ANALYSIS AND COURSE RECOMMENDATIONS

Create a system that analyzes employee or student skill profiles against industry benchmarks and recommends personalized training programs to address deficiencies.

3. VIRTUAL AI TUTOR FOR CAREER COUNSELING

Develop an AI tutor that conducts career guidance sessions, assesses strengths and aspirations, and suggests education or training pathways to optimize career growth.

#BUSINESS INTELLIGENCE & DATA SOLUTIONS

1. AI-POWERED DECISION SUPPORT

Design intelligent systems that digest complex datasets and present actionable insights and predictive models tailored to founders and business leaders' strategic decisions.

2. DATA INTEGRATION & VALIDATION TOOLS

Build software to automate the integration of diverse data sources, perform cleaning and validation, and harmonize data formats to guarantee analytics accuracy.

3. AUTOMATED COMPETITIVE ANALYSIS DASHBOARD

Create a dynamic platform that continuously tracks competitors' activities, product launches, and market changes, delivering real-time strategic intelligence for companies.
